About ALM25

Project Objectives

Solar Distiller
& Perception Interviews

How can solar ovens be integrated
into traditional Mayan cooking
practice?

Making traditional recipes
solar oven friendly

Solar Oven

4 interviewees
High interest
Lack of knowledge

Traditional cooking

5am until 7am
Making Panuchos with Salsa

1 Egg cooking time: 1 hour
10 Eggs cooking time: 2-3 hours

Testing

Salsa
(Tomatoes and Habanero)
Cooking time: 3 hours

Tortilla → Tostadas (Crisp)
Drying time: 2 hour

Jamaica
Cooking time: 1.5 - 2 hours

Testing

Corn for Tortilla
(soaked overnight)
Cooking time: 5 hours

Mid Workshop

Camote (sliced)
Cooking time: 2 hours

Participate in 2 different days
construction workshop
Show the testing process

Collaboration

Share results
Receive feedback
Get ideas

1
First time
sticky note interview

4
Second time
sticky note interview

2
Community members set up
solar oven by themselves

3
Taste solar oven made food
Jamaica, salsa and tostadas

Would you be interested in using a solar oven?

Do you know how to use a solar oven?

How ready do you feel to use it?

Legend: BEFORE the Workshop AFTER the Workshop

Achievements

Output

Input x2

Solar distiller set up
in the sun

Solar distilling

After few hours,
it's steamy, so its
working!

Distilled water runs down
the tilted surface to be
collected

Setting up

pH testing

Samples

Documenting tests

Perception interviews

Community members' perceptions on the students' projects on solar ovens and water

Insights

Positivity towards the projects

Projects have provided information to the community

Interest and motivation to learn

Interviewing

Challenges

Language (need for translator)

Cultural differences - communication problems

Narrowing down the project to be more precise

Changing plans and uncertainty

Takeaways

Being calm and adaptable
to changing plans

Using gestures and spanish words in communication

Participation with community is the most important

Don't think too much based on the assumption

Next Steps

Analyse data and write the final report with the Mexican teams

Leaflets summarizing cooking process and interview insights regarding the use of solar energy

Ideal world results

The community recognizes our work, and the information shared is valuable.

People's interest spread throughout the community, encouraging more experiments with solar energy

Our work to be the foundation for later year's team

Vision for ALM

In thirteen years we hope:

Continuous and closer collaboration between student projects and community

The community will have a higher engagement and acceptance for ALM projects
